

CHARPALLET v1.0

SMART BIOCHAR REACTOR

CharPallet Rendering

The ALL Power Labs CharPallet is a smart, compact, Combined Heat and Biochar (CHAB) gasifier system designed to convert waste woody biomass into high-quality, high-temperature biochar and thermal energy. It is based on our v3.0 architecture using APL's innovative Swirl Hearth design, including innovations which widen the range of acceptable feedstocks, reduce feedstock preparation requirements, and improve emissions.

Using smart Internet of Things (IoT) protocols and sophisticated digital Measurement, Reporting, and Verification (MRV) systems, the CharPallet is able to connect directly with carbon market platforms to generate carbon credits. It also includes our latest innovations in control and UI systems

This sophisticated standalone gas-making system is optimized for high-carbon, low-PAH biochar production. Sized for community farms and gardens as well as educational institutions, multiple units can be networked to create a Virtual Carbon-removal Plant (VCP). CharPallets make an ideal test platform for R&D and demonstration activities such as validation of feedstocks, syngas-to-alternative-fuel conversion, such as Renewable Natural Gas (RNG), and other gasification and renewable-energy research. It can also be paired with a separate Power Generation module to produce up to 20 kW of electricity.

We offer these data with reasonable confidence given our long-running data acquisition in the development of our gasifier-genset systems and distribution of their biochar byproduct.

CORE PERFORMANCE SPECIFICATIONS

GAS MAKING SYSTEM	
Biomass Conversion Rate	5-25 kg/hr
Maximum Gas Flow Rate	60 m ³ /hr
Producer Gas Composition	<50 mg/m ³ Tar
THERMAL SYSTEM	
Heat Output	50 kWth
Hot Water temperature Range	80° - 90° C
Interface Plumbing Size/type	1 1/2 inch NPT
Internal Operating Pressure (Relief Pressure)	100 kPa (15 PSI)
PRELIMINARY BIOCHAR VALUES	
Biochar Yield (fraction of input biomass by weight)	20%
Carbon Content	>90%
H:C Ratio	<0.2
Polycyclic Aromatic Hydrocarbons (EPA 16 PAH)	<50 mg/kg
Benzo[a]pyrene PAH - B(a)P-TEEQ basis	0.0 mg/kg

SMART AUTOMATION

FEATURES	
Remote Monitoring	Temperature, Pressure, Biomass/Biochar Mass
Automated Start Up & Operation	Automated Electric Ignition & Valving
Remote Control	Technical Proof
IoT Data Collection to Cloud	Mobile Connectivity with 3rd Party Apps
Process Optimization	On-board Automation
Measurement Reporting & Verification MRV Process Monitoring	10+ Temp. 5+ Pressure Lambda, Mass Airflow
MRV Input	Biomass Consumption
MRV Output	Biochar Creation

COMBUSTOR SPECS

PRELIMINARY VALUES	
Materials - Combustion sleeve	310 SS 3" rock wool insulation
Duty Cycle	100%
Emissions	AQMD compliant in some districts

The specifications provided herein are working values based on standard operation with qualified feedstock & are subject to change without notice

CHARPALLET RENDERINGS

GASIFIER SIDE

SWIRL-HEARTH REACTOR COMPONENTS

All specifications are subject to change without notice

SUPPORTING INFRASTRUCTURE REQUIREMENTS

SPECIFICATIONS	
Form Factor	Half Skid
Footprint	3 feet x 6 feet (1 meter x 2 meters)
Clearance: for external components and material loading/unloading	4 feet all sides (125 centimeter)
Shore Power	120/240 Vac 1800 W max
Fuel Drying	15% ± 3% moisture (dry weight) may require External Drying Module
Fuel Loading	Conveyor or Manually
Biochar Handling	Manual or Conveyor
Instrumentation and Controls	Interactive automation, monitoring & datalogging systems

BIOMASS FEEDSTOCK

SPECIFICATIONS	
Particle Size	1/8 in. - 1.5 in. (3 mm - 65mm)
Walnut Shells	Compatible
Hardwood Chips (e.g. oak, ash, beech)	Compatible
Softwood Chips (e.g. pine, fir, cedar)	Compatible
Fines Fraction: less than 1/8 inch	<12% by weight
Main Fraction: 1/8 inch to less than 2.5 inches	>75% by weight
Coarse Fraction: greater than 1.5 inches and all must be less than 2.5 inches	<3% by weight
Moisture Content (Dry Basis)	<15% External Drying Required

ALL Power Labs

ALL Power Labs is the global leader in small-scale gasification technology. We make biomass-fueled power generators that are ready for everyday work, to serve real-world, distributed-energy needs. Our compact gasifiers are now at work in over thirty countries, and support research at more than fifty universities around the world.

Our team is an unusual combination of hands-on fabricators and university-trained scientists and engineers. The result is a powerful combination of technical ability and physical know-how for developing innovative energy solutions.

ALL Power Labs makes machines that transform organic waste into useful Power and Products, for work at the intersection of industry, agriculture, and climate. APL intends to make a consequential impact on global energy poverty and greenhouse gas drawdown, through mass delivery of its carbon-negative energy devices.

Our facility is in Berkeley, California. Please contact us to arrange a visit the next time you are in the Bay Area. We would love to show you around.
